

Teddy small room heater

Product description

TEDDY is a convector heater with 248W, electronic thermostat and cold draft function. It is ideal for heating small rooms e.g., toilet rooms.

Cold draft function means the heater will automatically switch to frost guard setting (5°C) when exposed to cold air (e.g., venting out the room). After 15 minutes it will go back to original setting.

The packaging is recyclable and is disposed in paper containers for cardboard.

Electrical connection and use

Before connecting the heater, ensure that the main supply is 230V ~ 50Hz. The heater must be connected to a wall socket in the same room it is intended to be used. Do not use a socket in adjacent rooms using an extension cable.

Care and Maintenance

Turn the thermostat dial to minimum and turned the switch off. Remove the cord from the socket by gripping the plug and gently pull it out of the wall socket. Make sure the heater is cooled down before cleaning.

Clean the outside with a damp cloth. Never use abrasive cleaners or submerge the heater in water or other liquids. Twice a year, the heater should be vacuumed.

Operational technical information

Warranty

There is a 5-year warranty on the products. In the event of a fault with the oven, a receipt must be presented for replacement within the warranty period.

Other information

Defective ovens must be disposed of in separate receptacles for electrical waste. The ovens must not be repaired, dismantled or modified.
